1           6. The conveyor of claim 4, wherein said lining  
2 has a thickness in the range of between 0.05 and 0.5 mm.

1           7. The conveyor of claim 4, wherein said lining  
2 is applied to said back support in accordance with one  
3 of undertakings including the application in molten state  
4 and spraying.

1           8. The conveyor of claim 1, wherein said at least  
2 one wall has a surface adjacent said path and having a  
3 consistency resembling that of the surface of an orange  
4 peel.

1           9. The conveyor of claim 1, wherein another of  
2 said walls is a portion of a conveyor belt arranged to  
3 advance particulate material along said path.

1           10. The conveyor of claim 9, wherein said walls  
2 further include a third wall confronting said at least one wall  
3 and being disposed at one side of said portion of said  
4 belt, said third wall consisting at least in part of a  
5 ceramic material.

1           11. The conveyor of claim 10, wherein said duct  
2 includes two additional walls disposed at the other side  
3 of said portion of said belt and providing tracks for  
4 said portion of said belt.

1           12. The conveyor of claim 11, wherein at least  
2 one of said additional walls has substantially trapezi-  
3 form projections abutting said other side of said portion  
4 of said belt.

1           13. The conveyor of claim 10, wherein said portion  
2 of said belt has two elongated marginal portions and said  
3 additional walls have surfaces each adjacent and each  
4 extending lengthwise of a different one of said marginal  
5 portions.

1           14. The conveyor of claim 10, wherein said belt  
2    is located at a level above said at least one wall and  
3    said third wall and above said path.

1           15.    The conveyor of claim 1, wherein said walls  
2    form part of a cigarette rod making machine.
